

Product-Aligned Learning Assistance for Funobotz

Problem Statement 1 | Progressive-Disclosure Hackathon

HACKATHON PROBLEM STATEMENT

Challenge

Funobotz offers multiple hands-on STEM and paper robotics products, each with its own learning objectives, activities, concepts and build experiences.

Develop an intelligent learning assistance system that supports a customer specifically in relation to the Funobotz product or products they have purchased. The assistance should remain relevant to the applicable product context and help the learner progress through the Funobotz learning and building experience.

Final Deliverable

A functional, integration-ready plugin, extension, module, widget or equivalent deployable component that can be incorporated into the Funobotz Store / learning ecosystem. A standalone demonstration website alone will not be considered the final deliverable.

The challenge intentionally does not prescribe an architecture, workflow, AI model, database design, interaction flow or implementation method. Teams are expected to design and justify these independently.
