

Resource Pack 2 - Product Knowledge & Test Data

PBM 1 | Product-Aligned Learning Assistance for Funobotz

RELEASE WINDOW: 1:30 PM | PARTICIPANT RESOURCE PACK 2

Purpose of this release

This release introduces official Funobotz product knowledge and synthetic hackathon customer-purchase records. Teams must incorporate the new information into the solution they designed earlier. No architecture or workflow is prescribed.

Product knowledge release

Product	Approved learning context	Relevant concepts / experiences
Petalo	A light-up, non-programmable discovery character used with challenge cards and connected subworld activities.	Light in real-world environments; observation; safety awareness; cause and effect; explanation and communication.
Quacky - A Duck Bot	A non-programmable moving duck robot powered by a BO motor through a simple circuit.	Motor action; battery power; simple circuits; electrical energy to mechanical movement; cause and effect.
Tolly	A non-programmable character that uses a timer circuit and red-yellow-green LEDs in a repeating sequence.	Timer circuits; LEDs; sequencing; circuit connections; electronic cause and effect.
Tiko - A Scorpio Bot	A non-programmable robot whose motor pulls and releases a thread to create an up-and-down tail movement.	Motors; simple circuits; thread-based mechanical motion; electrical energy to motion; troubleshooting.

Synthetic purchase-access dataset

The following records are created only for the hackathon. They are not real customer data.

Hackathon Customer	Purchased Funobotz products
FZ-HACK-001	Petalo; Quacky
FZ-HACK-002	Tiko
FZ-HACK-003	Tolly; Petalo
FZ-HACK-004	Quacky; Tiko; Tolly
FZ-HACK-005	No valid purchased product in the supplied dataset

Content boundary for this phase

- Product-aligned assistance must remain grounded in the Funobotz product information released to the team.
- A customer can have access to more than one Funobotz product.
- The existence of a product in the catalogue does not automatically mean that every customer has access to its product-specific learning assistance.

- Organizer-provided build guides, story cards, challenge cards or learning sheets, if issued separately, are part of the approved knowledge source for this phase.

Phase 2 participant responsibility

- Use the released Funobotz product data in the working solution.
- Demonstrate behaviour for single-product, multi-product and invalid/no-access test records.
- Show that product-specific learning information remains relevant to the applicable Funobotz product context.
- Retain and evolve the architecture created in Phase 1 rather than replacing the challenge with a fixed demonstration.

The method used to identify, retrieve, restrict, organise or present product knowledge is intentionally not specified.

Product descriptions are condensed from public Funobotz Store product pages accessed 2 October 2026. Synthetic customer records are hackathon-only test data.
